My Dream Boat - AI Experience

9 Boat Shows 2027

AI Photo Interactive Overview

Boat show attendees will use an iPad to select one of nine regional waterways and one of two to eight boats based on the waterway selected. Once the selections are made, they take a selfie with the iPad. While the AI generates the appropriate image, static educational content pops up for their selections. The image can then be approved, retaken or a short-form video can also be created. While the video is being generated, additional static educational content will appear. Lead capture will then happen at the end of the experience and allow attendees to download their image and video via email or text. There will also be a secondary larger display for the most recent images and videos that were taken and visible for others to view.

This interactive will be deployed at nine different shows between January and February. Each deployment will be the same interactive experience except for the show name/logo.

Statement of Work

Design a single branded AI photo interactive that will be deployed at nine different boat shows. This allows for one major redesign and two rounds of minor revisions. The only change to the interactive for each show will be the show logo. Note: additional designs/features can be accommodated via change order.

Interactive Pricing

Item	Detail	Amount
AI Photo Interactive — per event	Per event	$4,875
Number of events	9 events	× 9
